

HAPPY FACTORY

Team: Even Jose

Members: Piyush Sahoo (BTech CSE 2nd yr)

GAME STORY

You are a factory worker at an unknown factory, producing seemingly meaningless mechanical pieces. As the game progresses, you slowly realize that these components are actually parts of weapons.

Through overheard calls between the **General, Manager, and Player**, subtle hints reveal that the factory is manufacturing weapons for Nazi Germany. The player is forced into a moral dilemma: **assemble weapons efficiently and aid the Nazi war machine, or deliberately perform poorly and risk being executed as a traitor.**

The better you perform, the more efficiently you contribute to the Nazi war effort—and the more likely you are to be celebrated as a **Nazi war hero**. The worse you perform, the more you resist the system, but the greater the danger to your own life.

THE THREE THEMATIC PILLARS

1. COMIC	The presentation uses a deliberately comic visual language: chibi proportions, bold black outlines, pop-art color blocking, expressive faces, oversized UI elements and punk spray-paint/stencil graphics. The cheerful absurdity is part of the satire.
2. TWIST	The player's performance becomes morally inverted. Playing very well makes the factory more efficient and contributes to more deaths, while playing poorly risks punishment or execution. The player must choose between becoming a celebrated Nazi war hero through efficiency or resisting through poor performance at the risk of their own life.
3. LIGHT	Lighting is a narrative mechanic. The factory moves from bright morning yellows/cyan through orange, purple, crimson and navy into near-black midnight. As the story gets morally darker, the physical world literally loses its light.

CHARACTERS

Factory Worker (Player)	Assembles the weapons and battles the moral dilemma of what efficiency truly means.
Manager	Oversees the player's production. Punishes poor performance and can even execute the player for failing to meet expectations.
General	A top military official in the Nazi regime. Only appears in person at the end of Level 5, arriving on a tank. In earlier levels, the General can be heard speaking to the Manager; these conversations gradually hint at whom the weapons are being made for.

GAMEPLAY LOOP

Receive ticket → assemble → operate controls → seal/test → beat timer → receive rating → repeat. Players drag abstract containers and components such as filters, valves and heavy latches, then operate levers/valves to satisfy specifications before the timer expires. Accuracy and speed determine stars, bonuses and progression.

Overheard dialogue: Calls between the General and Manager, sometimes involving the Player, provide narrative clues while the player continues working. The dialogue gradually reveals the true purpose of the factory.

FIVE-LEVEL NARRATIVE / LIGHTING ARC

LEVEL	LIGHT	NARRATIVE / GAMEPLAY
1 — MORNING	Bright yellow + cyan	Cheerful arcade music; simple assembly work establishes the productivity-game fantasy.
2 — AFTERNOON	Warm orange + purple	Longer shadows; "airtight transit specifications" introduce the first anomaly.
3 — DUSK	Deep purple + crimson	"Rail car density" and "high volume" enter phone conversations; metallic sparks increase.
4 — TWILIGHT	Navy + neon red	"Special facilities in the East." Claustrophobic framing; manager remains cheerful.
5 — MIDNIGHT	Near-black + single spotlight	Arcade music stops. Engines and tank treads dominate. The General arrives on a tank for final inspection.

THE TWIST: PERFORMANCE BECOMES MORAL CHOICE

A high-performing player is not simply 'winning': they are making the factory more efficient and therefore increasing its capacity to produce weapons. A player who performs poorly resists the system, but the factory's punishment structure puts their own life at risk. **There is no clean heroic score.**

The intended realization is: **"I need to get better at this game" → "What exactly am I getting better at?"**

CLIMAX & FINAL IMAGE

At midnight, the General arrives on a tank, inspects the final production and can recognize the player for exceptional performance. The apparent arcade triumph is then reframed by the wider context: the worker has become a celebrated contributor to the Nazi war machine.

Final thematic statement: HAPPY FACTORY weaponizes the language of a comic, cheerful productivity game to create a twist in which success has moral consequences, while the literal loss of light mirrors the player's growing awareness of what their work means.
